
SUCTION PUMP PA 150/25

TECHNICAL SHEET

USE

It is used to remove excess water after the development of flat screens or for cleaning residue application of catalysts / hardeners or protective coatings in the process of finishing the screen itself.

TECHNICAL FEATURES

The suction pump is composed of three parts:

- Motor impeller channel to 150 cubic meters / hour;
- Central body with door opening that allows the extraction of container that collects the waste intake;
- Galvanized iron suction blade that can be provided in two main sizes: 24 and 40 cm.

POWER

380 volt – 50 Hz

SAFETY

We recommend the use of rubber gloves and protective guard noise
