

MOTORIZED STRETCHING MACHINE

with Manual closing Clamps

Model TMTE

TECHNICAL SHEET

TECHNICAL FEATURES

- Made by painted stainless steel.
- Manual closing clamps;
- Motorized version model ;
- All movements are effected by 3 motors driven by a control panel ;
- Complete of n° 3 pression bars and all accessories.
- The TMTE "multistretcher" is a mesh tensioning unit for the professionals. It allows stretching mesh on many frames of different formats and profiles at the same time. The waste of mesh is minimised and the most economical production is guaranteed.
- The frames can be stretched straight or at any angle with synthetic mesh, metallised polyester as well as stainless steel mesh to produce reproducible stencils for all printing purposes.
- Due to the motor driven movements of all 4 sides, a parallel, even mesh tension of warp and weft is guaranteed; the uniform stretching over the entire area is maintained by the clamps on all four sides which are riding independently on roller bearings.
- Frame contact with the mesh again is motor driven for easy handling.

STANDARD MODELS

Code	Name and Model	Model	Useful size cm.	Overall dimension (LxWxH) cm.
